2019/2020 Breeding Season - Terms and Conditions

Dear Mare Owner,

Thank you for your enquiry about breeding your mare this season. At Adelaide Plains Equine Clinic, we offer a wide range of equine reproduction services including chilled and frozen semen artificial insemination, as well as stallion collection and shipment of chilled semen.

It is best to bring your mare to the clinic on the first day you first notice her in season. If you prefer to induce oestrus in your mare, we recommend giving her an injection of prostaglandin (dispensed through the veterinary clinic) on a Thursday and then evaluating her either Sunday night or Monday morning, depending on the days the stallion will be collected.

Once she is detected in oestrus, she will be scanned every other day until a breedable follicle is detected. We will then order semen and she will be given deslorelin to induce ovulation. The semen is then collected at the airport or post office and ensured that it arrives at the clinic in the best possible condition. It is preferable (and cheaper!) if the mare owner delivers the semen to the clinic. If that is not possible, we can arrange pick up, at your own cost via Pakair. Frozen semen should be transferred to our clinic prior to commencement of breeding.

2019/2020 Artificial Insemination Prices

CHILLED SEMEN: Fixed price for chilled semen AI \$400, including 16 day pregnancy scan if performed at the clinic. Excludes drugs & agistment.

FROZEN SEMEN: Fixed price for frozen semen AI \$700, including 16 day pregnancy scan if performed at the clinic. Excludes drugs & agistment.

20% off fixed price fee for each additional cycle (possible exclusion for known problem mares).

After the 16 day pregnancy scan is positive, we recommend you book your mare in for a 45 day pregnancy scan to ensure the pregnancy is healthy and has been maintained. The Cost is \$85 if performed at the clinic. Please note additional scans may be suggested as being required if the 16 day scan is not conclusive of a single healthy embryo. It is your responsibility to ensure these scans are followed up. These scans may incur further costs.

Note: Your mare may require additional diagnostic techniques & services such as a uterine swab, biopsy, or flush prior to insemination and after insemination treatment of fluid including elimination of a twin if found present. The cost of consumables, drug, laboratory fees, other services are additional costs and will be added to the account.

APEC Agistment: \$45/day–mare & foal \$40/day–single yard

After you choose a stallion for your mare, please give us a call so that we can book in your mare. We can then determine the best possible plan in order to get your mare in foal this season. Note: if the combined age of the mare and stallion are above 25, there is a lesser chance of breeding success. For older mares, it is advised to choose a younger stallion.

ALL FEES ARE TO BE PAID IN FULL WHEN THE MARE IS PICKED UP.

Please Note: A copy of Horse Registration Certificates &/or Microchip Numbers **MUST** be provided for identification purposes prior to all breeding services.
